EXPERIENCE

University of Central Missouri, Warrensburg MO
Graduate Assistant – Student Engagement and Experience *August 2025 – Present*

- Provide administrative support to 15+ student organizations by managing forms, tracking participation, and assisting with event logistics.
- Analyze engagement data from events and campus visits to identify participation trends and inform planning for future programming.
- Lead the planning and delivery of campus-wide workshops and collaborative events, coordinating communications with student organizations and campus departments

Student Advisor / Analyst – Study Abroad *March 2024 – August 2025*

- Extract and analyze data from the VIA TRM Database to create weekly, semester, and yearly reports on study abroad program performance, tracking metrics for 400+ annual applications.

Statistician – International Student Services *May 2024 – May 2025*

- Developed an analytics workflow across 45+ datasets within the International Students' Services department database to identify workload gaps, providing data evidence used by department leadership to improve resource allocation and staffing.

Uwe Multi Tech – Business Operations Associate *April 2021 – November 2023*

- Researched and evaluated potential business names based on relevance, market fit, and alignment with the company's services.
- Conducted industry and competitor research to compare service offerings, market positioning, and emerging opportunities.

PROJECTS

Stakeholder Analysis: Warrensburg Chamber of Commerce | Stakeholder Mapping

- Mapped and prioritized key stakeholders using the Stakeholder Salience Model and Power–Interest Matrix to assess influence, interest, and communication needs.

Financial Comparative Analysis: BlackBerry vs. CrowdStrike | Financial Analysis, Strategic Analysis

- Compared BlackBerry and CrowdStrike using financial statements, operating trends, and industry information to evaluate differences in growth, profitability, and strategic positioning.

Customer Churn Predictive Modeling | R, Logistic Regression, Random Forest

- Analyzed 7,000+ customer records to identify factors associated with customer churn and develop predictive classification models, achieving an AUC of approximately 0.86.
